

# Quiver Plots in Python

How to make a quiver plot in Python. A quiver plot displays velocity vectors as arrows.

Plotly Studio: Transform any dataset into an interactive data application in minutes with AI. [Sign up for early access now.](https://plotly.com/studio/?utm_medium=graphing-libraries&utm_campaign=studio_early_access&utm_content=sidebar) ([https://plotly.com/studio/?utm\\_medium=graphing-libraries&utm\\_campaign=studio\\_early\\_access&utm\\_content=sidebar](https://plotly.com/studio/?utm_medium=graphing-libraries&utm_campaign=studio_early_access&utm_content=sidebar))

Quiver plots can be made using a [figure factory](https://plotly.com/figure-factories/) (/python/figure-factories/) as detailed in this page.

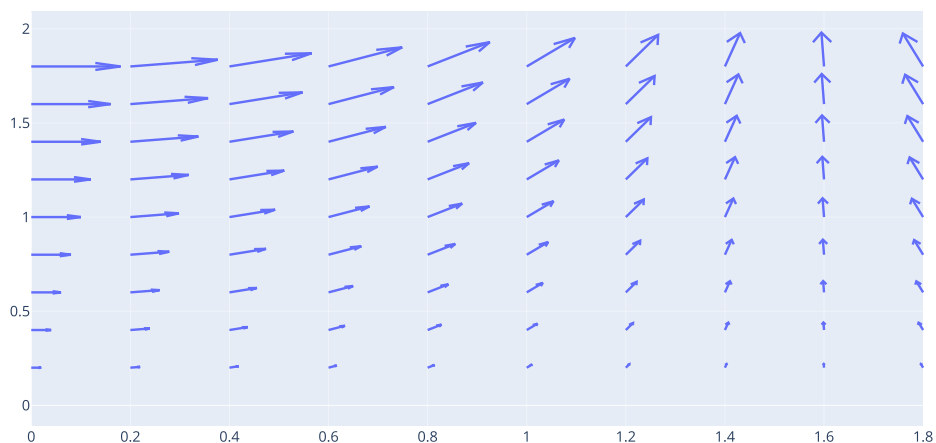

## Basic Quiver Plot

```
import plotly.figure_factory as ff

import numpy as np

x,y = np.meshgrid(np.arange(0, 2, .2), np.arange(0, 2, .2))
u = np.cos(x)*y
v = np.sin(x)*y

fig = ff.create_quiver(x, y, u, v)
fig.show()
```

## Quiver Plot with Points

```

import plotly.figure_factory as ff
import plotly.graph_objects as go

import numpy as np

x,y = np.meshgrid(np.arange(-2, 2, .2),
                  np.arange(-2, 2, .25))
z = x*np.exp(-x**2 - y**2)
v, u = np.gradient(z, .2, .2)

# Create quiver figure
fig = ff.create_quiver(x, y, u, v,
                      scale=.25,
                      arrow_scale=.4,
                      name='quiver',
                      line_width=1)

# Add points to figure
fig.add_trace(go.Scatter(x=[-.7, .75], y=[0,0],
                        mode='markers',
                        marker_size=12,
                        name='points'))

fig.show()

```

Reference

For more info on `ff.create_quiver()`, see the [full function reference \(https://plotly.com/python-api-reference/generated/plotly.figure\\_factory.create\\_quiver.html\)](https://plotly.com/python-api-reference/generated/plotly.figure_factory.create_quiver.html)

# What About Dash?

[Dash \(https://dash.plot.ly/\)](https://dash.plot.ly/) is an open-source framework for building analytical applications, with no Javascript required, and it is tightly integrated with the Plotly graphing library.

Learn about how to install Dash at <https://dash.plot.ly/installation> (https://dash.plot.ly/installation).

Everywhere in this page that you see `fig.show()`, you can display the same figure in a Dash application by passing it to the `figure` argument of the [Graph component](https://dash.plot.ly/dash-core-components/graph) (https://dash.plot.ly/dash-core-components/graph) from the built-in `dash_core_components` package like this:

```
import plotly.graph_objects as go # or plotly.express as px
fig = go.Figure() # or any Plotly Express function e.g. px.bar(...)
# fig.add_trace( ... )
# fig.update_layout( ... )

from dash import Dash, dcc, html

app = Dash()
app.layout = html.Div([
    dcc.Graph(figure=fig)
])

app.run(debug=True, use_reloader=False) # Turn off reloader if inside Jupyter
```

## Dash your way to interactive web apps.
