About App Manager

[SEE A DEMO](#)

The Dash Enterprise App Manager enables teams to deploy, manage, and share all of their Dash apps through a single portal and admin user interface.

Use multiple environments in the form of Prototype, User Acceptance Testing (UAT), and Production for different stages of Dash app development.

Dash Enterprise 5.2 offers Viewer Analytics for all your apps so you can make informed decisions and respond to changing business demands with accurate metrics.

App Portal

The App Manager portal enables you to organize, access, and share your Dash apps from a single view. Multiple Dash environments for development, QA/test, and production can be used to maintain and manage separate versions of your apps in the development cycle.

Teams can easily collaborate and iterate on multiple apps. Once installed, your team can upload and share as many apps as you want with as many end users as necessary.

Aug 7: Learn how teams turn insights into impact with Plotly Studio. [Reserve your webinar seat.](#)

Demo the App Portal on the Dash Enterprise App Gallery

Build, test, deploy — no IT or DevOps required.

Enable individuals and teams throughout the organization with discoverable analytic apps.

Install on-premises or in the cloud (Azure, AWS, and GCP).

Quickly iterate and deploy updates to applications to respond quickly to changing business demands.

Add a caching layer to your Dash apps with Dash Enterprise's onboard database (Redis or Postgres).

Deploy Dash apps easily using the Dash Enterprise CLI in minutes without needing IT or DevOps.

Lock down your Dash apps with built-in security features and auth via LDAP, PingFederate, Okta, SAML, or Kerberos.
