

How to wrap text in plotly.py's sunburst diagram?

Asked 5 years, 1 month ago Modified 4 years, 8 months ago Viewed 5k times

I want to wrap text, as in if it is a long sentence, add line breaks so the font has bigger size, for example, like here

I have the following data that can be downloaded from <https://gofile.io/d/8djNCU>:

Group1	Group2	Group3	Group4	Values
Australia	My super du	This is a bit s	And here is s	1
Australia	My super du	This is a bit s	And here is s	1
Australia	My super du	This is a bit s	And here is s	1
Australia	My super du	This is a bit s	And here is s	1
Australia	My super du	This is a bit s	And here is s	1
Australia	My super du	This is a bit s	And here is s	1

Customize settings

```
df = pd.DataFrame(
```

```

    dict(group1=g1, group2=g2, group3=g3, group4=g4, my_values=my_values)
)

fig = px.sunburst(df, path=['group1', 'group2', 'group3', 'group4'],
values='my_values')

fig.show()

```

The current sunburst diagram looks like this:

to be as big as possible and split by
ation.

What do you mean by wrap the text? Do you mind to clarify? – [rpanai](#) Jun 2, 2020 at 21:25

Please check the update. – [Curious](#) Jun 3, 2020 at 9:16

By adjusting the width in the customwrap function, I was able to make a nice sunburst. The answer was provided by the plotly's GitHub community.

14

```
import plotly.express as px
import pandas as pd
import textwrap

def customwrap(s,width=30):
    return "<br>".join(textwrap.wrap(s,width=width))

df = pd.read_excel("/Users/stuff/Desktop/test.xlsx")

g1 = df.Group1.map(customwrap)
g2 = df.Group2.map(customwrap)
g3 = df.Group3.map(customwrap)
g4 = df.Group4.map(customwrap)
my_values = df.Values

df = pd.DataFrame(
    dict(group1=g1, group2=g2, group3=g3, group4=g4, my_values=my_values)
)
fig = px.sunburst(df, path=['group1', 'group2', 'group3', 'group4'],
values='my_values')

fig.show()
```
