About Snapshot Engine

SEE A DEMO

With the Dash Enterprise Snapshot Engine, you can create, annotate, archive, and share point-in-time views of your Dash apps.

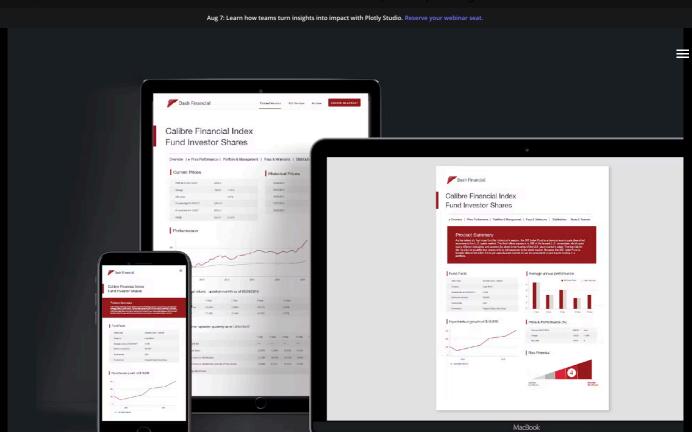

With only a few lines of code, Snapshot Engine adds powerful capabilities to your Dash apps:

- Share a link to point-in-time Dash app views
- Trigger email and PDF reports programmatically
- Enable on-demand snapshots through the Dash app UI
- Automate nightly snapshots to archive Dash app state
- Draw or comment directly on the Dash app canvas, then share by email

Features

PDF Reporting Share Annotate Archive Monitor Intuitive API

Automated, Pixel-Perfect PDF Generation

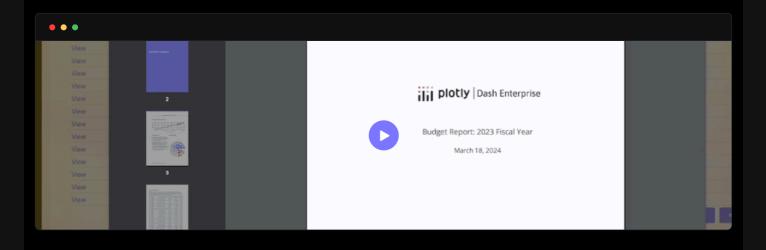

Dash Enterprise includes a PDF generation engine that reliably converts your Dash apps into PDFs. The PDF engine is designed to work with the high-level Page & Report components in the **Dash Enterprise Design Kit**, so that you can build pixel-perfect PDF reports entirely in Python. No DevOps or CSS required.

The Snapshot Engine generates PDFs on the server instead of in the end user's browser to ensure consistent, uniform layouts and to enable entirely programmatic PDF reporting pipelines as part of Dash callbacks or **job queues**.

Analytics and reporting in a single platform.

- Create on-demand reports as shareable links or downloadable PDFs.
- Automate monitoring and reporting of real-time streaming data.
- Modernize and consolidate auditing and compliance infrastructure.

Watch this video from Solutions Engineer Cal Reynolds to see Snapshot Engine in action!
